VS-09-252-991A-32186

Sequence 32186, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 32186

LENGTH: 330
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GENERAL INFORMATION:

Sequence 26116, Application US/09252991A

Patent No. 6521795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

LENGTH: 395
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 APPLICANT: MARC J. A; Contents: annotation; animal lectin domain homology
C; Comment: Pulmonary surfactant is a complex of phospholipids and proteins that lowers the C; Comment: This protein is a sialoglycoprotein synthesized by alveolar type II cells. It pendent on the presence of calcium ions.
C; Superfamily: mannose-binding lectin; C-type lectin homology
C; Reywords: alveolar proteinosis; calcium; disulfide bond; gaseous exchange; hydroxyprolifically. P:1-17/Domain: signal sequence #status predicted <SIG>F;18-102/Region: Collagen-like
F;18-102/Region: Collagen-like
F;20.207/Binding site: carbobydrate (Asn) (covalent) #status predicted
F;30/Modified site: 4-hydroxyproline (Pro) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    C;Accession: T05424

NyAlternate names: pulmonary surfactant 32% apoprotein; pulmonary surfactant associated
C;Species: Canis lupus familiaris (dog)
C;Date: 30-Sep-1987 #sequence_revision 30-Sep-1987 #text_change 16-Jul-1999
C;Accession: A25296; A61227; Ā60142
R;Benson, B.; Hawgood, S.; Schilling, J.; Clements, J.; Damm, D.; Cordell, B.; White, R.
Proc. Natl. Acad. Sci. U.S.A. 82, 6379-6383, 1985
A;Title: Structure of canine pulmonary surfactant apoprotein: cDNA and complete amino ac
A;Reference number: A25296; MUID:86016705; PMID:3863100
A;Rocession: A25296
A;Molecule type: mRNA
A;Residues: 1-248 ABBN>
A;Note: the authors translated the codon TTG for residue 60 as Pro
A;Note: part of the sequence, including the amino end of the mature protein, was confirm
